

FULL STACK ENGINEER

Dimitrije Bukejlovic

dimibukejlovic@icloud.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Full Stack Engineer with 5 years of experience delivering complete, production-grade web products from scratch. I specialize in resolving critical performance bottlenecks, having previously dropped client-side load times by over a third and eliminated unexpected runtime crashes across platforms. I take full ownership of the development lifecycle - from database architecture to tight security models - ensuring systems run without lag under heavy traffic.

PROFESSIONAL EXPERIENCE

TokenFlow | Senior Full Stack Engineer

Jan 2025 - Present

- Designed and deployed a scalable multi-tier architecture using Node.js/Express and PostgreSQL, introducing connection pooling and optimized indexing for 10M+ database rows with sub-second query execution.
- Engineered robust API architectures, RBAC, and secure token-based authentication workflows, reducing unauthorized access attempts and enhancing data-flow reliability.
- Established high-quality coding standards and automated linting/testing pipelines using Jest and Cypress, ensuring predictable delivery for high-performance platform features.

ScaleRoad LLC | Software Engineer

Dec 2022 - Jan 2025

- Streamlined complex client-facing workflows and responsive component architecture, leveraging advanced state-management patterns and lazy-loading to reduce First Contentful Paint (FCP) by 35%.
- Formulated seamless frontend-backend API contracts and implemented aggressive data-caching strategies, reducing API latency by 30% across core system components.
- Standardized global error-handling patterns and defensive loading states across desktop and mobile environments, eliminating UI layout shifts and runtime exceptions.

Northstar Technologies | Full Stack Engineer

Sep 2021 - Nov 2022

- Delivered end-to-end full-stack applications using Laravel and React/Redux, refactoring legacy state management to eliminate redundant re-renders and reduce client-side memory overhead.
- Enforced senior-level Git workflows and clean code standards, while crafting high-converting UI/UX interfaces inspired by Linear/Vercel aesthetics.

Vertex Digital Studio | Full Stack Engineer

Mar 2020 - Aug 2021

- Built end-to-end full-stack solutions with Node.js and Laravel for US startup and e-commerce clients, translating business requirements into production dashboards, secure auth flows, and 20+ RESTful API endpoints.
- Designed scalable database schemas and relational persistence layers, optimizing query execution paths to handle 500K+ daily data rows with strict data integrity.

SKILLS

Languages: TypeScript, JavaScript, SQL, PostgreSQL, Bash Shell Scripting

Backend & Systems: Node.js, Express, Laravel, RESTful APIs, GraphQL, Redis, WebSockets, BullMQ, Prisma, Eloquent

Frontend Engineering: React, Next.js, Redux Toolkit, Tailwind CSS, Radix UI, Server-Side Rendering (SSR), Core Web Vitals

Cloud & DevOps: Docker, Docker Compose, AWS, GitHub Actions, CI/CD Pipelines, Vercel, Turborepo, Linux Administration

Security & Testing: Authentication (OAuth2, JWT), Granular RBAC, Jest, Vitest, Cypress, TDD

SELECTED PROJECT CASE STUDIES

Nexus Console: Infrastructure Dashboard | Node.js, Express, Next.js, PostgreSQL, Supabase, Tailwind CSS

- Orchestrated a high-fidelity monitoring console with secure multi-tenant data isolation, hierarchical workspace logic, and granular RBAC.
- Structured optimized relational data models and server-side caching to eliminate cross-tenant leakage risks while keeping complex layouts sub-second.

SYNAPSE Developer Platform | React, Next.js, Redux Toolkit, Tailwind CSS, Radix UI

- Developed a responsive developer platform using reusable UI primitives and stable data flows for a fluid experience across device form factors.
- Fine-tuned global state propagation and session-stream hydration, minimizing main-thread blocking during rapid production-level interactions.

DevPitch Pro: Developer Pitch Workspace | TypeScript, Next.js, Node.js, AI Workflows, Radix UI

- Devised an AI-assisted workspace that transforms raw technical inputs into structured professional narratives and recruiter-facing formats.
- Built repeatable LLM integration flows with structured JSON outputs to maintain consistent styling and deterministic content quality.
